

L2TP on Android Devices

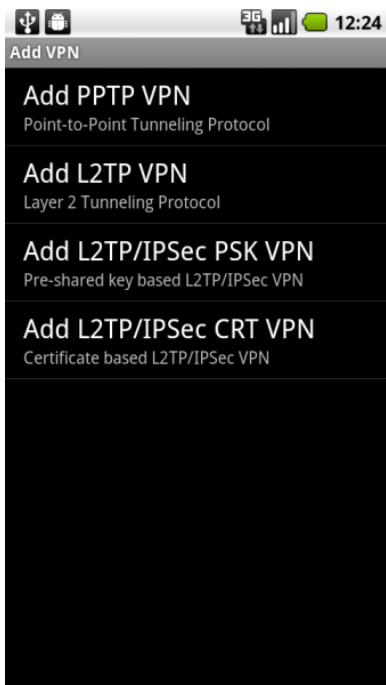

This document contains instructions for configuring and connecting via L2TP for GTA Firewalls.

Configuring

1. Go to VPN Settings by pressing the **MENU** key and select **SETTINGS** then navigate to **Wireless & Networks > VPN Settings**
2. Select **ADD VPN**

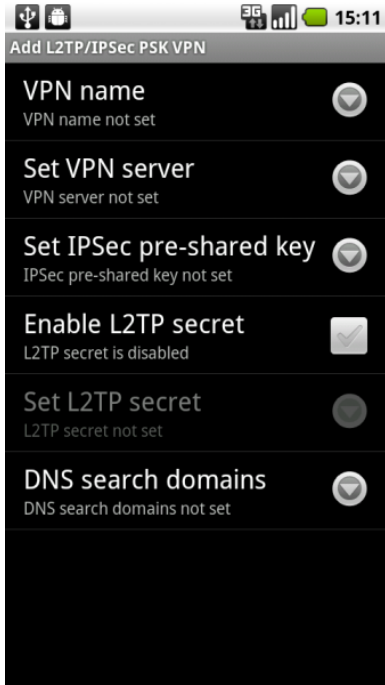

3. Select **ADD L2TP/IPSEC PSK VPN**

4. Select the arrow to the right of **VPN NAME** and enter the name for the VPN tunnel.
5. Select the arrow to the right of **SET VPN SERVER** and enter the IP address or resolvable Domain Name of the firewall that you will be connecting.
6. Select the arrow to the right of **Set IPSec pre-shared key**. Enter the pre-shared key configured for the L2TP server.

7. Press the **MENU** key and select **SAVE**.
