The Internet has drastically changed the way the world does business. It has become an essential tool in the everyday workplace, however, it may also become a primary distraction from productive activities. Businesses need to protect themselves from the legal, productivity, bandwidth and security risks unrestricted Web access presents.

Surf Sentinel[®] 2.0, utilizing Surf Control content filtering engine, is a complete and accurate Internet content filtering solution that meets the requirements and demands of both users and technology providers.

Surf Sentinel 2.0 features one of the largest databases of categorized URLs. It combines blocking, monitoring, and policy management in a centrally managed, out-sourced solution. Surf Sentinel 2.0 integrates seamlessly into your GTA firewall to make it a complete filtering solution. When used in conjunction with GTA Reporting Suite (available separately), real-time Internet usage reports are available from current and historical firewall log data.

Key Features:

- Easy To Use
- Accurate blocking & filtering based on 41 content categories
- Economical Deployment
- No additional hardware needed
- Internet Usage Reporting via GTA Reporting Suite (available separately)

41 Content Categories

- Adult/Sexually Explicit
- Criminal Skills
- Drugs, Alcohol & Tobacco
- Gambling
- Hacking
- Hate Speech
- Violence
- Weapons
- Advertisements

- Search Engines
- Sex Education
- Shopping
- Sports
- Streaming Media
- Travel
- Usenet News
- Web-based Email

Minimum Requirements

- GTA Firewall operating on GNAT Box® System Software version 3.5 and above
- Web browser and Internet connection
- GTA Firewall product registration
- Surf Sentinel 2.0 subscription and feature activation code

All information contained on this datasheet refers to Surf Sentinel 2.0 released in conjunction with GNAT Box System Software version 3.5.x.

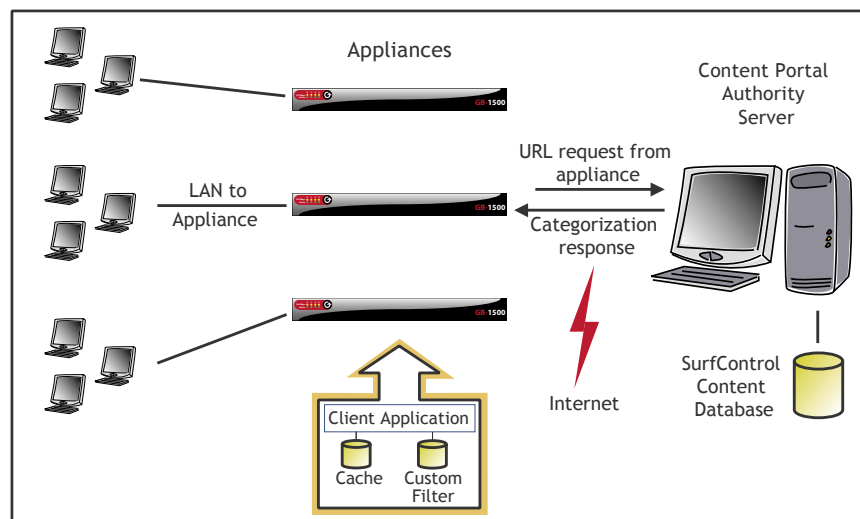

* Specifications subject to change without notice

With the abundance of non-productive information available on the Internet, organizations need technology that provides the ability to manage and control Internet access. Recognizing the need to manage Internet resources, businesses want filtering and monitoring solutions that integrate with their existing gateway or network devices rather than pay for and manage additional hardware and software on their networks.

By implementing Internet Access Management through Surf Sentinel 2.0 content filtering on your GTA firewall, you are assured all web traffic flowing through the firewall is subject to the filters and policies you establish, resulting in a safer, more productive Internet experience.

Surf Sentinel 2.0 combines Surf Control's Content Portal Authority technology into an outsourced filtering model to provide a comprehensive solution for Internet Access Management. Surf Sentinel 2.0's core technology hosts and manages URL categorization, and policy management. Surf Sentinel 2.0 provides access to all of Surf Control's content – the industry's largest and most relevant content database. Flexible interpretation of acceptable use policies is possible with 41 content categories and over 5.5 million categorized URLs. Content is available in 65 languages and updated daily which increases the database by an average of 35,000 new sites per week.

Because it is unobtrusive, easily managed and cost effective, it meets the needs of the business owner. This out-sourced model stores the software and categorized lists on off-site servers so no additional hardware is needed. Multiple server locations provide redundancy, effectively eliminating downtime due to system failures or heavy data traffic.

Local Allow and Deny Lists

GTA firewalls provide additional control over URL accessibility through local allow/deny lists. The lists provide an easy way for the system administrator to override the content categorizations and either allow or deny specific URLs.

GTA Reporting Suite

Utilizing GTA Reporting Suite (available separately) the administrator can view real-time reports presented in both graphic and tabular formats such as sites visited, attempts to view prohibited sites, and Internet usage by individual users. Real-time Internet access reports are available for current or historical data stored in GTA firewall log data.

Configuration

Surf Sentinel 2.0 is sold as an annual subscription on a per user basis. GTA Firewall owners may request a 30-day demonstration version of Surf Sentinel 2.0 at no charge by visiting <http://www.gta.com> and submitting the Surf Sentinel 2.0 Demo Request form. Sorry, only one 30-day demo per GTA firewall.
